

Aidan Bell

aidanbell0182@gmail.com - 647-296-4046 - aidanb.io

Full-stack software engineer with 4+ years building and modernizing data-heavy web apps. Strongest on complex dashboards and form-heavy workflows — component systems, state architecture, validation, and API integration. Comfortable owning UI through data models, with a bias toward usable, maintainable interfaces.

Skills:

Frontend: React, TypeScript, Tailwind, TanStack, shadcn/Radix, Zod, React Hook Form

Backend: Node.js, Express, Python, Flask/Django

Data: MongoDB, PostgreSQL, MySQL, SQL

Cloud/Tooling: AWS, GCP, Firebase, Linux, GitHub Actions, Git

Also: Redux, MaterialUI, C++, Qt, Bash, Lua

Work Experience:

Software Engineer – Cluep Nov. 2024 - Present

- ◇ Rebuilding a long-lived enterprise dashboard end to end (UI, client state, and API layer) for data-heavy campaign workflows, modernizing a legacy React/Redux codebase
- ◇ Split monolithic detail flows into sectioned routes and clearer state boundaries, improving navigability, shareable deep links, and maintainability
- ◇ Redesigned dense list/detail UX for scannability and consistent action hierarchy; hardened form and bulk CSV upload flows with clearer validation feedback
- ◇ Modernized tooling and dependencies, improved caching/API reliability, and cut deploy time by ~80%; published internal UI packages via npm. Delivered full-stack features spanning Express.js/MongoDB and React architecture, including query/aggregation work for large-scale data

Software Engineer – Gabzebo May. 2023 - Nov. 2024

- ◇ Led a React + MobX WYSIWYG editor for touch-screen presentations, integrated with a Flask REST API
- ◇ Built Linux touchscreen software in C++/Qt for live video capture, encoding, and upload
- ◇ Used Bash and Python to integrate software with field hardware for recording workflows

Full-Time Lead Instructor (Software Engineering) – General Assembly Feb. 2022 - May 2023

- ◇ Mentored cohorts of up to 25 students in an intensive 12-week full-time bootcamp
- ◇ Owned and improved curriculum from static web fundamentals through full-stack apps
- ◇ Emphasized clean code, version control, REST, MVC, and SQL/NoSQL best practices

Project Manager – MRA International Nov. 2014 - Aug 2019

- ◇ Streamlined repairs ops with forms, barcodes, and reporting; cut errors and improved throughput
- ◇ Led ~18,000-laptop deployment for HP's largest eastern USA public sale, finishing ~1 month early
- ◇ Built inventory tracking for 20,000+ devices to improve visibility and cost control

Projects:

Schema Form Playground – aidanb.io/playground - React, Zod, React Hook Form, Tailwind

- ◇ Live schema-driven form engine: edit JSON schema, render an accessible validated form
- ◇ Supports common field types, sample schemas, and clear parse/validation feedback

The Cage Page – github.com/aidanbell/cage-page - React, Express, MongoDB, OAuth, JWT, AWS

- ◇ Full-stack app with OAuth, JWTs, and a public REST API deployed on AWS
- ◇ Form-heavy rule creation on top of third-party movie catalog data

Markdown98 – github.com/aidanbell/Markdowner98 - React, markdown-it, html2pdf.js

- ◇ Markdown editor with live preview, synchronized scrolling, and PDF export
- ◇ First place, Mintbean / General Assembly CareerHack

Education:

General Assembly - 3 Month intensive Software Engineering (2019)

Montclair State University - B.A. in English Literature (2014)
